CAST partners with 'world source code archive' to businesses better understanding of the code protecting their products and services.

CAST, a leader in software intelligence, has partnered with Source Code Archive to provide businesses with a better understanding of the code protecting their products and services.

"We are thrilled to welcome CAST as a key partner, joining us in our endeavor to collaborate, structure, and preserve the precious knowledge embodied in source code across all industries and all domains," said [Name], CEO, Founder and CTO of Software Heritage.

CAST Software Heritage partnership: Navigating licensing issues.

According to CAST’s Executive Vice President of Research & Development, Olivier Bonnemaison, the partnership will provide the "first-ever commercial software solution for managing third-party license and security across the globe's software supply chain.

CAST is bringing a unique identification of these risks to software professionals, providing a clear and comprehensive view of the code and license in their applications, allowing them to identify these risks with lightning fast analysis and fix them quickly.
