“Programs must be written for people to read, and only incidentally for machines to execute.” – Harold Abelson

Distinguishing features

- **executable** and **human readable** knowledge (an *all time new*)
- naturally **evolves** over time
 - development history is key to its understanding
- complex: large web of **dependencies**, millions of SLOCs

Definition (Commons)

The **commons** is the cultural and natural resources accessible to all members of a society, including natural materials such as air, water, and a habitable earth. These resources are held in common, not owned privately. <https://en.wikipedia.org/wiki/Commons>

Definition (Software Commons)

The **software commons** consists of all computer software which is available at little or no cost and which can be altered and reused with few restrictions. Thus *all open source software and all free software are part of the [software] commons. [...]*

https://en.wikipedia.org/wiki/Software_Commons

Software is spread all around

Fashion victims

- many disparate development platforms
- a myriad places where distribution may happen
- projects tend to migrate from one place to the other over time

Software is spread all around

Fashion victims

- many disparate development platforms
- a myriad places where distribution may happen
- projects tend to migrate from one place to the other over time

One place...

... where can we find, track and search *all* source code?

A word cloud of terms related to software fragility, including 'damage', 'disaster', 'malicious', 'obsolete', 'dependencies', 'attack', 'aging', 'tear', 'media', 'dangling', 'wear', 'corruption', 'encryption', 'format', 'deletion', 'reference', and 'storage'. The words are arranged in various sizes and orientations, with 'damage' and 'disaster' being the largest. The background features a faint world map and a pattern of colorful arrows pointing in various directions.

damage
disaster
malicious
obsolete
dependencies
attack
aging
tear
media
dangling
wear
corruption
encryption
format
deletion
reference
storage

Like all digital information, FOSS is fragile

- inconsiderate and/or malicious code loss (e.g., Code Spaces)
- business-driven code loss (e.g., Gitorious, Google Code)
- for obsolete code: physical media decay (data rot)

A word cloud of terms related to software fragility and digital information loss. The words are arranged in a circular pattern, with some overlapping. The largest words are 'damage', 'disaster', 'malicious', 'deletion', and 'obsolete'. Other words include 'attack', 'dependencies', 'format', 'corruption', 'encryption', 'dangling', 'wear', 'reference', 'storage', 'aging', 'tear', and 'media'. The background features a faint world map and several large, stylized arrows pointing outwards in various directions.

damage
disaster
malicious
deletion
obsolete
dependencies
attack
format
corruption
encryption
dangling
wear
reference
storage
aging
tear
media

Like all digital information, FOSS is fragile

- inconsiderate and/or malicious code loss (e.g., Code Spaces)
- business-driven code loss (e.g., Gitorious, Google Code)
- for obsolete code: physical media decay (data rot)

If a website disappears you go to the Internet Archive...

... where do you go if (a repository on) GitHub goes away?

Software Heritage

THE GREAT LIBRARY OF SOURCE CODE

Our mission

Collect, **preserve** and **share** the *source code* of *all the software* that lies at the heart of our culture and our society.

Cultural Heritage

Industry

Research

Education

Software Heritage

Open approach

- 100% FOSS
- transparency

In for the long haul

- replication
- non profit

Archiving goals

Targets: VCS repositories & source code releases (e.g., tarballs)

We DO archive

- file **content** (= blobs)
- **revisions** (= commits), with full metadata
- **releases** (= tags), ditto
- (project metadata)
- **where & when** we found any of the above

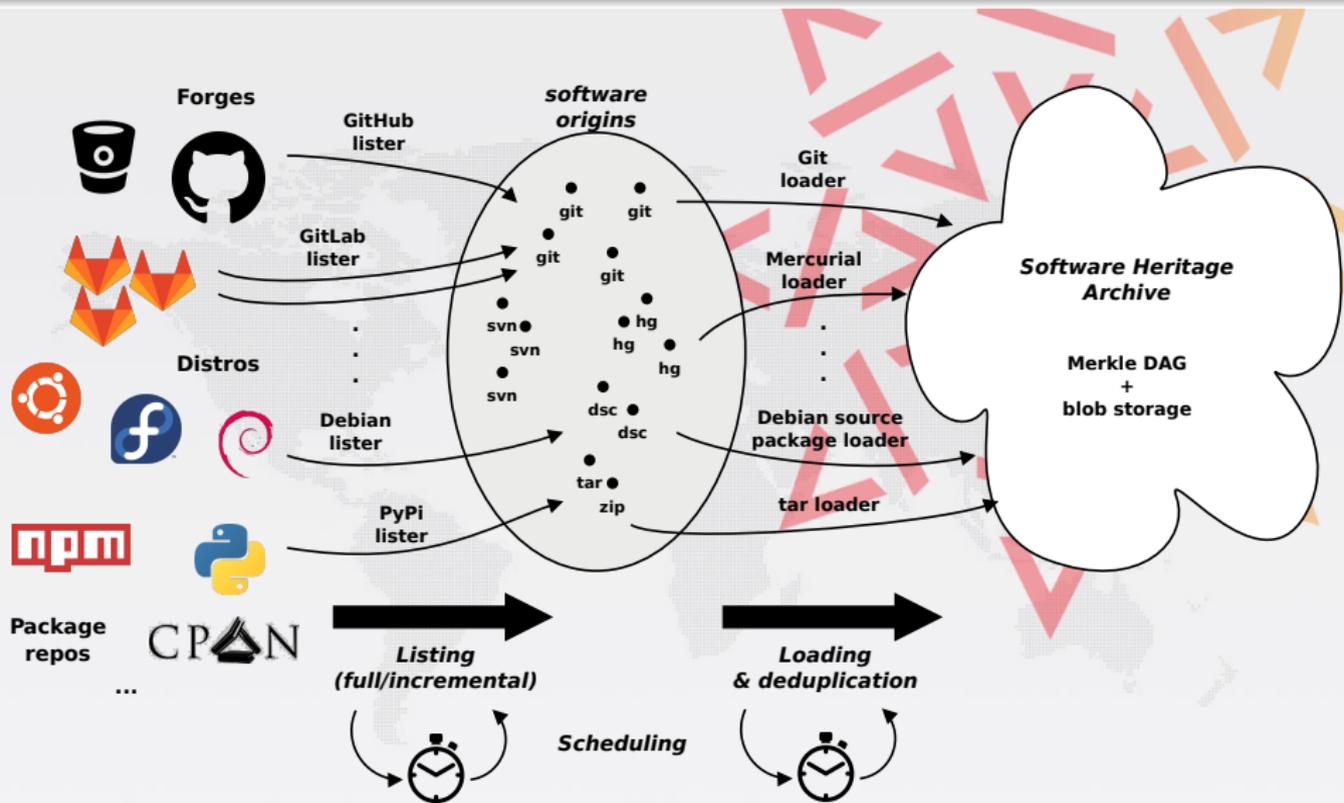

... in a VCS-/archive-agnostic **canonical data model**

We DON'T archive (UNIX philosophy)

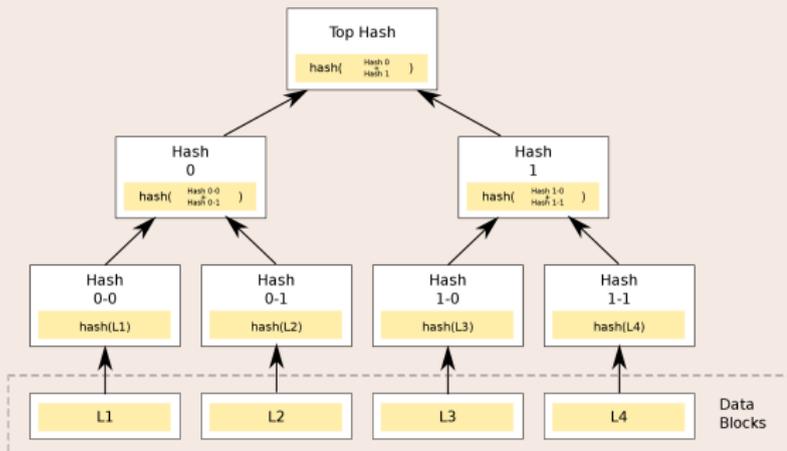

- homepages, wikis → collaboration with the Internet Archive
- BTS/issues/code reviews/etc.
- mailing lists

Long term vision: play our part in a *"semantic wikipedia of software"*

Data flow

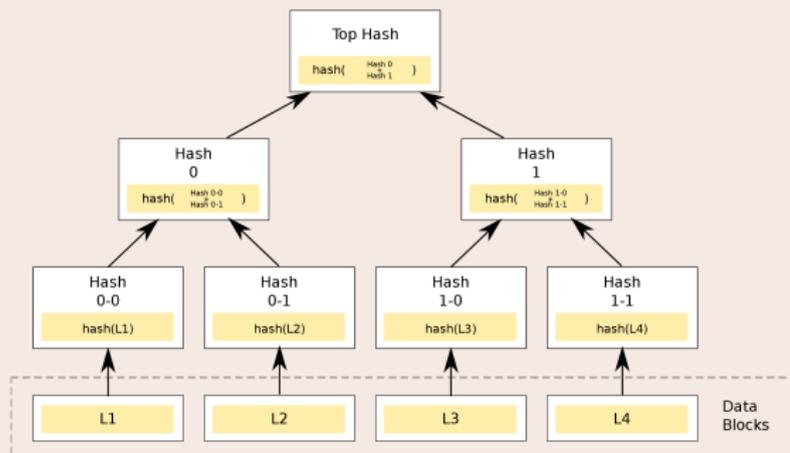

Merkle tree (R. C. Merkle, Crypto 1979)

Combination of

- tree
- hash function

Merkle tree (R. C. Merkle, Crypto 1979)

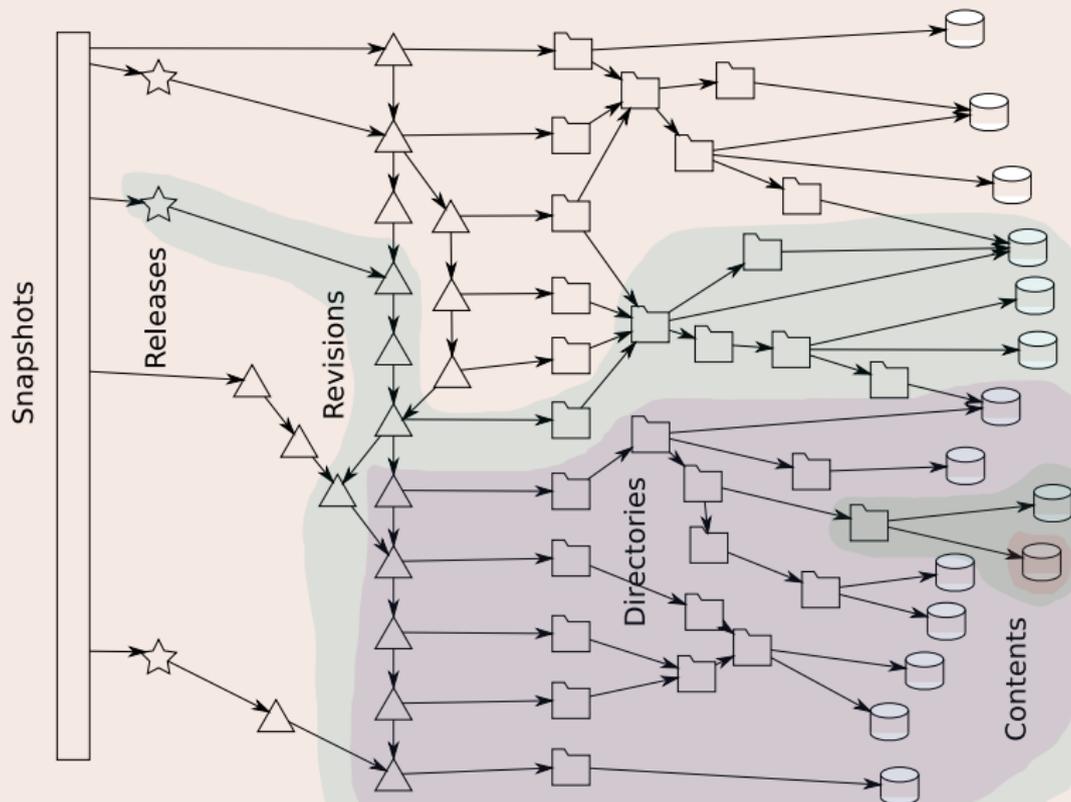

Combination of

- tree
- hash function

Classical cryptographic construction

- fast, parallel signature of large data structures
- widely used (e.g., Git, Bitcoin, IPFS, ...)
- built-in deduplication

The archive: a (giant) Merkle DAG

SHA1 collisions considered harmful

```
create domain sha1 as bytea
  check (length(value) = 20);
create domain sha1_git as bytea
  check (length(value) = 20);
create domain sha256 as bytea
  check (length(value) = 32);

create table content (
  sha1          sha1 primary key,
  sha1_git      sha1_git not null,
  sha256        sha256 not null,
  length        bigint not null,
  ctime         timestamptz not null default now(),
  status        content_status not null default 'visible',
  object_id     bigserial
);

create unique index on content(sha1_git);
create unique index on content(sha256);
```

Our sources

- GitHub — full, up-to-date mirror
- Debian — daily snapshots of all suites since 2005–2015
- GNU — all releases as of August 2015
- Gitorious, Google Code — local copy (Archive Team & Google)

Our sources

- GitHub — full, up-to-date mirror
- Debian — daily snapshots of all suites since 2005–2015
- GNU — all releases as of August 2015
- Gitorious, Google Code — local copy (Archive Team & Google)

Some numbers

150 TB blobs, 5 TB database (as a graph: 4 B nodes + 40 B edges)

Some numbers

150 TB blobs, 5 TB database (as a graph: 4 B nodes + 40 B edges)

The *richest* source code archive already, ... and growing daily!

Planned features...

- *lookup* by content hash (done)
- *download*: wget and git clone from Software Heritage
- *provenance information* for all archived code and metadata
- *browsing*: wayback machine for archived code and its history
- *full-text search* on all archived source code files

Planned features...

- *lookup* by content hash (done)
- *download*: wget and git clone from Software Heritage
- *provenance information* for all archived code and metadata
- *browsing*: wayback machine for archived code and its history
- *full-text search* on all archived source code files

... and much more than one could possibly imagine

all the world's software development history in a single graph!

An ambitious, worldwide initiative

Inria as initiator

- .fr national CS research institution
- strong FOSS culture
- founding partner of the W3C

An ambitious, worldwide initiative

Inria as initiator

- .fr national CS research institution
- strong FOSS culture
- founding partner of the W3C

Supporters and *early partners*

ACM, **Nokia Bell Labs**, Creative Commons, **DANS**, Eclipse, Engineering, FSF, OSI, GitHub, GitLab, IEEE, Informatics Europe, **Microsoft**, OIN, OW2, SIF, SFC, SFLC, The Document Foundation, The Linux Foundation, ...

Going global

building an *open, multistakeholder, nonprofit* global organisation

Software Heritage is

- a revolutionary *reference archive* of *all* FOSS ever written
- a unique *complement* for *development platforms*
- an international, open, nonprofit, *mutualized infrastructure*
- at the service of our community, at the service of society!

Come in, we're open!

`www.softwareheritage.org` – *sponsoring, job openings*
`wiki.softwareheritage.org` – *internships, leads*
`forge.softwareheritage.org` – *our own code*
